REQUEST FOR A CORRECTED OR REVISED PATENT APPLICATION
PUBLICATION UNDER 37 C.F.R. §1.221(b)

Sir:

Certain printing errors appear in the patent application publication identified above. The errors appear in the specification and are apparent from the USPTO records. It is respectfully requested that a corrected patent application publication be granted for the above-identified application, in accordance with 37 C.F.R. §1.221(b). This request is made in order to correct the material mistakes incurred through the fault of the Patent Office.

For the convenience of the office personnel, the necessary corrections have been set forth in the attached sheets, which specifically reference the portion of the original specification where the correct text for the material mistakes appears in the application.

It is not believed that fees are required, however, any required fees therefore are hereby authorized to be charged to Deposit Account No. 16-0605.

Respectfully submitted,

Ryan W. Ogletree
Registration No. 47,468

In re: Fregonese *et al.*
Appl. No.: 10/529,177
Filed: March 24, 2005

On page 1, in the right-hand column, paragraph [0021] erroneously omits portions of the originally filed text and further erroneously combines the remaining text with the following paragraph. The correct text corresponding to present paragraph [0021] of the publication can be found in the originally file specification at page 4, lines 6-18.

The text of present paragraph [0021] of the publication should actually be two paragraphs and should read as follows (with text missing from the publication being provided here in hold):

“[0021] These objects, as well as others that will be more apparent hereinafter, are achieved, according to claim 1, by a support structure having a seat surface, particularly for bicycles and other pedal operated machines, comprising a substantially rigid or semirigid frame, means for connecting the frame to the bicycle or a pedal operated machine, a yieldable pad secured to the top face of the frame, covering layer superimposed to said yieldable pad, characterized in that the frame has one or more portions of different rigidity adapted to facilitate the pedaling motion.

[0021a] Thanks to such particular arrangement the support structure may fit the muscles of legs and buttocks and provide a high wellness and comfort, even to users having different body sizes, and without requiring expensive additional elements or excessive by complicated structures.”

For the purposes of clarity, a corrected version of pages 1-2 of the publication is attached.
